

“Chemical companies have developed detailed programs to try to assure safe transportation of their hazardous materials.”

Many accidents and incidents are beyond the control of the chemical-company shipper. We can't always control the environment through which our products will pass. Therefore, we do our best to see that the containers in which they travel withstand the shocks and strains of transportation. Equally important, we're making strenuous efforts to insure that our products are packed, loaded and moved properly.

TRANSPORTATION SAFETY MANAGEMENT PAYS OFF

Chemical companies have developed detailed programs to try to assure safe transportation of their

hazardous materials. Such programs may include worker training, performance audits, regulatory information and guidelines on safe transportation.

But the chemical industry doesn't work in a vacuum. So, *inter-industry* task forces bring chemical manufacturers together with railroads, trucking companies and other carriers in joint efforts to improve transportation safety.

CHEMICALS PREVENT ACCIDENTS, TOO

Chemical companies also have developed products, and are testing still others, that help prevent
