

Certain multiple rocket launchers have a range of 20 km.

● **A cargo bomb**, dropped from a plane, can scatter 72 antipersonnel mines and 22 antitank mines: one fly-over can scatter 600 mines over an area of 300 m by 200 m.

● **A container transported by helicopter** can contain 240 mines (at a ratio of 1 antitank mine to 5 antipersonnel mines): one fly-over by a helicopter loaded with 4 containers can sow a kilometre-long, 70 m wide minefield with a density of 3 mines per sq. m.

*Various methods of dispersion*
