Notes: (a) Gross birth rates per thousand population, which are defined as the quotient between the number of births in a given period and the average population during that period. They are implicit in the population projections prepared according to the recommended fertility hypothesis. (b) Rates implicit in population projections. They are defined as the quotient between the total number of deaths in a given period and the average population in the same period.

Notes: (a) In the non-Latin Caribbean, Cuba, and Nicaragua there is a national health system (except in Bermuda, where private hospitalization insurance is required), and the coverage of all residents, indicated in the table, refers to hospital medical services; in addition, these countries generally have social security which provides cash payments, and they are indicated in the table, whether for employees, the self-employed, and/or domestic service. In the remaining countries, the coverage indicated refers to social security both as medical and hospital services and as cash payments. (b) Unpaid family workers are excluded in almost all countries, and temporary workers are also excluded in eight. (c) Normally covers permanent employees in industry, trade, mining, transportation and communications, the civil service, and public services, and excludes agriculture and domestic service, as well as temporary home workers and unpaid family workers. (d) Coverage limited geographically to the capital city and some urban areas. (e) Voluntary coverage. union members in Panama are mandatorily covered. (f) Only for maternity (g) Voluntary continuation when a person changes from salaried to self-employed work
