FOREWORD

The papers printed in these Proceedings of the International Workshop on Earthen Buildings in Seismic Areas represent the contributions of participants at the conference as well as other authors. Not all of the papers are original and have been presented, at least in part, at other forums. However, they were submitted for this publication, and we felt it of value to include them because they provided relevant background to the conference theme.

Assigning the papers to one of the five topics turned out to be somewhat difficult because of the overlap in the categories. We have attempted to use our best judgement in these decisions.

Finally, in the interests of cost and time, it was not possible to reset the type nor to do more than a superficial job of editing the papers.
