INTRODUCTION

The Glossary of Abbreviations and Emergency Key Words is the fourth publication of the Licross/Volags Steering Committee for Disasters, our previous ones being Country Fact Sheets, National Disaster Preparedness Plans and Handbook.

The Committee is comprised of the following organizations :

Catholic Relief Services
League of Red Cross Societies
Lutheran World Federation
OXFAM
World Council of Churches.

The Committee was established in 1972 to share information in disaster situations between agencies and to develop disaster preparedness studies.

Owing to the accumulated and specialized disaster relief operations throughout the World a number of common words have been frequently used. The purpose of this study is to assemble, for easy reference, some terms commonly used in emergencies and to establish a basic vocabulary of disaster terminology.

UNDRO has been consulted in the finalization of the contents of this study. WHO has also contributed with its technical expertise.

Although every effort has been made to ensure accuracy, the Committee must decline any liability for the information contained in this Handbook, because changes can occur. Users of the publication are therefore advised to check locally information on the country concerned before acting on same. The Committee would nonetheless welcome any suggestions for improvement or corrections of information available to local users of the publication to facilitate amending subsequent editions.

It is hoped that the present study will be useful for day-to-day disaster relief activities.

E M E R G E N C Y K E Y W O R D S

1. Air-mass thunderstorm A thunderstorm occurs within a given unstable air-mass and is not caused by the passage of a front.
2. Anti-cyclone It is an atmospheric system opposite to a cyclone. Whereas in a cyclone or low-pressure area the winds circulate in a counter-clockwise sense in the northern hemisphere and clockwise in the southern hemisphere, the anti-cyclone circulation is clockwise in the northern and counter-clockwise in the southern hemisphere. In contrast with cyclones, which are usually areas of strong winds and bad weather, anti-cyclones ordinarily are characterized by fine weather and freak winds.
3. Arid climate A climate in which the rainfall is insufficient to support vegetation.
4. Ash flow In some eruptions of gas charged magma, only a relatively small proportion of the material is thrown high into the air by explosion. Much of the ash resulting from disruption of the rock froth remains suspended in a cloud which spreads outward close to the ground surface, producing an ash flow.
5. Atmosphere An atmosphere is the gaseous envelope which covers a planet or large satellite.
6. Atmospheric Pollution Contamination of the atmosphere by gases and solids produced in the burning of natural and artificial fuels, in chemical and some other industrial processes, and in nuclear explosions; the term may be considered also to include contamination produced by such processes as accumulation of cosmic dust, raising by wind of surface dust, eruption of volcanoes, decay of vegetation, evaporation of sea salt spray, and natural radio-activity.
7. Avalanche A large mass of snow and other materials which moves rapidly down a mountain slope. An avalanche begins when the gravity of the mass of snow becomes too great for the slope on which it rests, or when its foundation is loosened by spring rains, the blowing of the föhn (a warm dry wind) or other causes. Avalanches carry a considerable amount of rock debris with the snow and are therefore a geological agent of some significance.

8. Beaufort Scale

Scale for wind (numerical scale of wind speed in which the stronger the wind, the higher the number).

9. Bulgar

Food made from wheat (boiled, dried with coarse outside bran removed). 100% cooked whole wheat.

10. Calorie

The calorie, a unit of energy, was originally defined as the quantity of energy (or heat) necessary to raise the temperature of one gram of water, at constant atmospheric pressure, by 1°C. The kilocalorie (sometimes called the kilogramme-calorie or large calorie) is 1000 cal. The calorific value of foods is usually given in terms of kilocalories and through loose usage the prefix "kilo" is often omitted. The "calories" counted by persons on a reducing diet are kilocalories.

11. Cassava

The starchy root of two plants of the spurge family, the bitter cassava, and the sweet cassava, both important sources of food starches.

12. Cholera

Is a term that has been incorrectly applied to a wider variety of acute diarrhoeal diseases of short duration. In many instances these infectious agents are transmitted by food. These diseases are, however, to be distinguished from the acute, specific and highly fatal infection with *Vibrio cholerae* known as true cholera, Indian cholera or, most commonly Asiatic cholera.

13. Cholera Vaccine

A vaccine produced from *Vibrio cholerae* or *Vibrio eltor*. Usually 2 sub-cutaneous injections are given at about 21 days' interval. Immunity is short with a maximum protection of 6 months, and such protection is obtained in only 50% of cases. Usually, sanitary and hygienic measures rather than vaccination suffice in great emergencies. Cholera is subject to quarantine regulations.

14. Climatic Control

One of the relatively permanent factors which govern the general nature of the climate of a portion of the earth. They include a) solar radiation, especially as it varies with latitude, b) distribution of land water masses, c) elevation and large-scale topography and d) ocean currents. The general circulation of main wind systems sometimes are included, but they may better be considered a secondary control,

since they themselves are controlled largely by the above factors. All of these have been constant during historical times, but most or all of them have changed during geologic time and have caused large-scale changes of climate.

15. Climatography

A thorough quantitative description of climate, particularly with reference to the tables and charts which show the characteristic values of climatic elements at a station or over an area. The term often has a comparative geographic connotation. Like descriptive climatology it is sometimes used anti-thetically to climatology, when the latter is narrowly used to denote only the explanation of the causes for climatic conditions (physical climatology).

16. Climatological Forecast

A weather forecast based upon the climate of a region instead of upon the implications of current weather. Consideration may be given to the climatic behaviour of such synoptic weather features as cyclones and anti-cyclones, fronts, the jet stream, etc.

17. Climatology

Climatology is the science dealing with climate. Climate is the average condition of the atmosphere at a locality or over an area. Climate is determined by the daily weather events and their daily weather events and their seasonal patterns.

18. Communicable Disease

See infectious diseases.

19. Communications Resources

Public and private communication systems: police, fire, military, other governmental, private radio, T.V., newspapers, magazines and other news media, telephone and telegraph facilities, amateur (HAM) radio operators, etc. and operational inventory index and plan for coordination and utilization of these facilities and capabilities in time of disaster and emergency.

20. Conventional Food

A food available in a given community through the methods of classical agriculture and horticulture, animal husbandry, hunting, fishing, gathering or fermentation, and not subjected to unusual processing.

21. Corn-Soy-Blend (CSB)

69.7% Cornmeal, processed, gelatinized
22% Soy flour, defatted, toasted
2.7% Mineral premix.
0.1% Vitamin, Anti-oxidant premix.
5.5% Soy oil, refined, deodorized, stabilised

22. Corn-Soy-Milk (CSM)

59.2% Cornmeal, processed, gelatinized
17.5% Soy flour, defatted, toasted
15% non-fat dry milk spray process (amount may depend on availability).
2.7% Mineral premix
0.1% Vitamin anti-oxidant premix
5.5% Soy oil, refined, deodorized, stabilised

23. Creeping Disasters

Slowmoving disasters, such as drought, health deterioration, epidemics and famine that do not manifest themselves until extensive damage and suffering are widespread and the public demands emergency response.

24. Cyclone

A cyclone of middle and high latitudes is called a "depression". A tropical cyclone of moderate intensity is a "tropical storm", if of great intensity, a tropical cyclone in the Indian Ocean, Arabian Sea or Bay of Bengal is termed a "cyclone", in the western Pacific a "typhoon", in Western Australia a "willy-willy", in most other tropical latitudes a "hurricane".

That atmospheric pressure distribution in which there is a low central pressure relative to the surroundings. It is characterized on a synoptic chart by a system of closed isobars, generally approximately circular or oval in form, enclosing a central low pressure. "Cyclonic circulation" is counter-clockwise round the centre in the northern hemisphere, clockwise in the southern hemisphere; in either case the sense of rotation about the local vertical is the same as that of the earth's rotation.

25. Cyclonic Rain

Rainfall which is caused by the large-scale vertical motion associated with synoptic features such as depression and fronts. It is one of a broad three-fold classification of rainfall, the other classes being "orographic" and "convective".

26. Damage Assessment Appraising or determination of the actual effects resulting from a disaster.
27. Damage Forecasting Making pre-disaster studies of the probable effects of a disaster upon the people and country.
28. Damage Mitigation Lessening the severity of suffering and damage caused by disaster.
29. Demography Scientific study of human populations.
30. Desert A region in which rainfall is insufficient, in relation to rate of evaporation, to support vegetation.
31. Diet The total solid and liquid foods consumed by an individual or by a population group, either on an average basis or during a specified period.
32. Diphtheria Is a specific, localized and superficial bacterial infection that is associated with the formation of characteristic membrane, composed of fibrin and necrotic tissue and with the production of a powerful toxin. The lesion is normally situated in the upper respiratory tract but is occasionally related to previous wounds or ulcers of the skin.
33. Disaster A disaster is a catastrophic situation in which the day-to-day patterns of life are - in many instances - suddenly disrupted and people are plunged into helplessness and suffering and as a result need food, protection, clothing, shelter, medical and social care and other necessities of life.
34. Disaster Act Law of the Nation that provides the Chief Executive with broad powers to supplement the efforts and available resources of national, state and local governments to meet emergency demands and administer disaster plans.
35. Disaster Preparedness Disaster Preparedness may be described as action designed to minimize loss of life and damage, and to organise and facilitate timely and effective rescue relief and rehabilitation in cases of disaster.
