WHO MEDICAL KITS
FOR FORMER YUGOSLAVIA

KIT DESCRIPTIONS

Anaesthetic kit

Sufficient medicaments and material for 100 anaesthetics are provided. The kit is often distributed with the Surgical and Parenteral Fluids (IV fluid) kit.

Anaesthetic Supplementary kit

An additional and wider range of anaesthetic supplies are provided to expand the basic materials in the Anaesthetic kit.

Bandage Supplementary kit

Due to the activity on the front lines there are extra needs for bandages and compresses. This kit is distributed in special circumstances with surgical kits.

Chronic Disease kit

This kit was designed to complement the New Emergency kit and addresses the needs of patients with chronic diseases particularly pulmonary and cardiac ailments. It takes into account the specific requirements of Bosnia-Herzegovina and is targeted for a population of 10 000 people for 3 months

Clean Intermittent Catheterization kit (CIC)

Enough material is supplied for the sterile or clean intermittent catheterization for 10 patients with spinal chord injuries for 1 month.

Clinical Chemical Laboratory kit

Prepared by experts from Denmark, the kit is designed to cover the need for glass ware and stable reagents for the production of 20 000 tests and includes basic equipment for their preparation.

Clinical Microbiological Laboratory kit

The kit was prepared after extensive assessments on the field and upon the requests of laboratories across former Yugoslavia. It contains basic equipment and reagents enabling the analysis of 50 000 clinical specimens as well as tests for water purification.

Epidemic Response kit

Medicaments are supplied to respond to outbreaks of diarrhoeal disease. Treatment is based on the simple effective interventions of the WHO Programme on Control of Diarrhoeal Diseases. Each kit contains supplies to treat 100 cases of severe diarrhoea.

Hygiene kit

Designed for 10 person units for 1 month, the kit has been very well received by families and refugee camps. It has served not only to maintain basic sanitation levels important for the prevention of disease outbreak but has been a great boost to morale.

Insulin kit

Insulin, blood and urine tests, and equipment for injections are supplied to cover the needs for 10 patients for 6 months

Mental Hospital kit

The kit covers the needs of 50 hospitalized mentally ill patients for one month. It is targeted for specialized institutions and hospitals.

New Emergency kit

The kit consists of a basic and supplementary kit and has quantities of medical supplies sufficient for the general primary care needs for 10 000 people for about three months. The kit is designed to meet the needs of population with disrupted medical facilities in the second phase of a natural or other disaster, or displaced population without medical facilities.

Parenteral Fluids kit (IV Fluids)

Generous quantity of intravenous fluids for operative and post-operative care are supplied to supplement the surgical kit.

Pneumonia kit

This kit contains sufficient medicaments to treat 100 cases of pneumonia or acute upper respiratory tract infection in adults and children. It is based on the WHO Programme for the prevention of Acute Respiratory Infection (ARI).

Surgical kit (NORHOP 100-10 Surgical Resupply Unit)

This provides sufficient disposable medical equipment necessary for the treatment of 100 surgical patients for 10 days.

Transfusion kit

Developed for local circumstances by WHO Zagreb staff, this kit enables the complete collection and testing of 200 units of blood. Reagents for blood grouping, Hepatitis B and HIV testing are included.

Tuberculosis kit

The kit contains 50 treatment courses for 6 months and includes basic equipment for smear examinations.

Vitamin kit.

Nutritional deficiency has led to the clinical manifestation of a number of illnesses including scurvy, anaemia, night-blindness, and rickets. This kit was created to cover the needs for iron, folic acid, and vitamins A, C and D resulting from malnutrition. Distribution of the vitamin kit is targeted for primary health care centres, clinics, and hospitals at the discretion of medical staff. The kit is to be divided into 10 units: each unit is designed for 1 000 people for one month.
